Z-Finder Pro Zacuto

tournevis cruciforme

sac en toile

# Operating your Z-Finder Pro

## 1 Attach frame to Gorilla Plate

Press and hold frame against LCD and attach to camera with 1/4"-20 screw

## 2 Center frame on camera LCD

## 3 Rotate eyecup for desired position and attach Z-Finder to frame

## Included Parts:

## Features:

## 4 Focus the Z-Finder (Use letters in menu screens to focus on)

## 5 Install lanyard for protection

## Installation of Anti-Fog Cover

## ⚠ Precautions

The anti-fog protective covers naturally have a tackier surface than standard lenses and thus need to be cleaned differently. **Do not** wipe anti-fog protective cover with a dry lens cloth or tissue. Use a micro fiber lens cloth or Kim Wipe type tissue **and** soak with water. Wipe the cover then let air dry.

For more information, watch our tutorial video at Zacuto.com
